Deployment permission

Muita vezes não conseguimos provisionar um recurso no Azure devido a impossibilidade de criar recurso em determinada região. Tanto no Portal quanto pelo Azure CLI

```
C:\Users\Marcus>az sql server create -g rg-hospital-demo -n hospitaldemo -l eastus -u admin_fiap -p minhasenhaforte
(RegionDoesNotAllowProvisioning) Location 'East US' is not accepting creation of new Windows Azure SQL Database servers at this time.
Code: RegionDoesNotAllowProvisioning
Message: Location 'East US' is not accepting creation of new Windows Azure SQL Database servers at this time.

C:\Users\Marcus>
```

Para consultar quais regiões podemos provisionar recursos, precisamos verificar a policy com o nome “[Allowed resource deployment regions](#)” em nossa conta.

Na pesquisa de recurso, procure o recurso chamado Policy. Clique no recurso e navegue pelo menu: Authoring -> Assignments -> [Allowed resource deployment regions](#)

Deployment permission

This screenshot shows the Microsoft Azure portal interface for the 'Policy | Assignments' section. The left-hand navigation pane includes links for Overview, Compliance, Remediation, Events, Authoring (highlighted with a red circle '2'), Definitions, Assignments (highlighted with a red circle '3'), Machine Configuration, and Exemptions. The main content area displays search filters and assignment counts: 'Total Assignments' is 1, and 'Initiative Assignments' is 0. A search bar at the top right contains the text 'policy'. A dropdown menu is open, showing results categorized under 'Services' and 'Marketplace'. Under 'Services', 'Policy' is highlighted with a red arrow and a red circle '1'. Other services listed include Application Policy, Feedback Policy Controls, Firewall Policies, and various Microsoft Entra ID services. Under 'Marketplace', items like Web Application Firewall (WAF), Firewall Policy, and Aruba ClearPass Policy Manager (CPPM) 6.11.1 are listed. A red arrow points to the 'Allowed resource deployment regions' link in the assignment list below.

This screenshot shows the same Microsoft Azure portal interface, but with the search results expanded into a table. The search filters now include 'Scope : 2026-2TDSPI-MARCUS MARTINS LEITE-FP1754F' and 'Definition type : All definition types'. The assignment counts are updated: 'Total Assignments' is 1, 'Initiative Assignments' is 0, and 'Policy Assignments' is 1. The table below lists the assignment details:

Assignment name	Scope	Type
Allowed resource deployment regions	2026-2TDSPI-MARCUS MARTINS LEITE-FP1754F	Policy

["mexicocentral","brazilsouth","southcentralus","eastus","spaincentral"]

ATENÇÃO

Mesmo que a policy mostre que você pode realizar deployments para as regiões informadas, isso não significa que ira conseguir provisionar para determinada região.

A policy especifica quais regiões você pode realizar o deploy de recursos:

- **Policy (Allowed locations):** “Você *tem permissão* para criar nessa região.”
- **Mas o serviço/Capacidade do Azure SQL:** “Mesmo com permissão, eu *não estou aceitando novas criações* aqui agora.”

A solução é tentar criar em outra região que a sua policy permite.
Resumindo, precisa ser a tentativa de regiões
